About Us

Pace Process

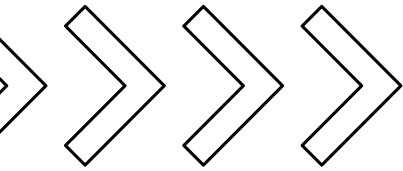

Started off as Power and Control Engineers in 1985, Pace evolved into one of the premier Electrical and Instrumentation contractor in India, specializing in the Oil and Gas, Power, Fertilizer plants. Having worked in India, Middle East and North Africa, it has vast experience in industrial construction.

Why?

Why Rope Access

With our wide experience in construction, we are aware of the costs and time associated to working with scaffolding works for reaching hard to access areas, we have identified an optimal alternate access solutions to enhance outcomes which is widely used in other countries and also being used in plants in India. Our intention is to ensure that you have access to IRATA (Industrial Rope Access Trade Association) certified personnel are executing such highly specialized jobs with the utmost adherence to all safety standards.

Safety

Safety in Rope Access

As an alternate access solution, working with rope access entails many safety features:

- There are two ropes used by a rope access worker; a primary working rope and a secondary backup or safety rope. The worker is constantly anchored to both. In an unlikely event of the primary rope failing the secondary rope prevents a fall and enables rescue
- All personnel are highly trained and certified by IRATA
- All equipment used is certified by TPI agencies and regularly maintained
- All work is executed in compliance to the client safety standards

SOLUTIONS

Rope access proves to be an effective alternate access solution for multiple scenarios for onshore and offshore installations

INSPECTION

- NDT Works
- Stack Inspection
- Pipeline Inspection
- Quality Control
- Wind turbine Inspection
- Bunker Inspection
- Tank Inspection

INSULATION & PAINTING

- Painting of Stacks, tanks
- Insulation works
- Vessels, pipelines, stacks, columns fireproofing and cladding

WELDING

- Welding of pipes, valves
- Tray support welding
- Welding inspection
- Repair works

ELECTRICAL

- Cable tray installation
- Cable laying
- Cable inspection
- Cable termination
- Lighting works
- Lightning protection
- F&G equipment

INSTALLATION & MAINTENANCE

- Instrument replacement
- Nozzle cleaning
- Bolt tightening
- Flare repair
- All repair works
